# Mini Project choice due Sep 24

## CSE 331 Mini project choices

Fall 2018

Please check the table below before submitting your mini project team composition to make sure your case study is not being used by another group. Case studies are assigned on a first come first serve basis.

Group	Chosen Algorithm	Case Study	Links
Chinmayee Bandal, Sarah Peters, Tracy Zheng ()	Dijkstra's Algorithm	Google Maps	<a href="#">Link 1</a> , <a href="#">Link 2</a>
Jonathan Wong, Jacky Eng, Jack Bett (Segmentation Fault)	LinkedIn Feed Algorithm	LinkedIn Feed Relevance System	<a href="#">Link 1</a> , <a href="#">Link 2</a> , <a href="#">Link 3</a>
Waiwai Kim, John Demetrios, Frank Tsai (Autonomous Vehicle)	Deep Deterministic Policy Gradients	Reinforcement Learning in Autonomous Vehicle	<a href="#">Link 1</a> , <a href="#">Link 2</a> , <a href="#">Link 3</a>
Mohammed Shmsuddin, Vincent Feng, Krispi Vani (Group 1)	Data Compression Algorithms	Sound data compression	<a href="#">Link 1</a>
Nicholas Weiser, Matthew Lichtenhal, Vincent Blotta (TryNotToFail)	Timber Match-Filtering Algorithm	Ancestry	<a href="#">Link 1</a> , <a href="#">Link 2</a>

# T/F polls on piazza

## The first true/false question

Apologies for the delay in getting this started.

The plan is to do a weekly True/false question on piazza. (I'm about 3 weeks late so there will be three T/F Qs in one after the other.) The way it is going to work is that every Monnesday (or so) I will post a statement in a poll and ask you guys to vote True or False. (Please just vote and do not post your justification: yet.) Then after two days, I will give the correct answer (and we will see how well crowd-sourcing works in this context) and then ask for you guys to construct the correct justification. Note that this is to give you guys more practice for the true/false questions on the exams. So try and work on these on your own so that you gain some practice.

Anyhow, here is the **question for this week**. Is the following statement **True** or **False**?

Given  $n$  numbers  $a_1, \dots, a_n$  such that for every  $i \in [n]$  (we will use  $[n]$  to denote the set of integers  $\{1, \dots, n\}$ ) we have  $a_i \in \{0, 1\}$ . That is, we are given  $n$  numbers each of which is a bit. Then we can sort these  $n$  numbers in  $O(n)$  time.

- True  
 False

# Lecture Recording poll

## Lecture recordings is now closed

A total of 102 vote(s) in 219 hours

26 (25% of users)

I do not come to the lecture and just watch the video later on

0 (0% of users)

I do not come to the lectures and do not watch the videos

40 (39% of users)

I do come to the lectures and look at the videos later

36 (35% of users)

I come to the lectures and do not look at the videos later

# Support pages poll

## Support pages is now closed

A total of 45 vote(s) in 220 hours

# Today's agenda

$O(n^2)$  implementation of the Gale-Shapley algorithm

More practice with run time analysis

# Gale-Shapley Algorithm

Initially all men and women are free

At most  $n^2$  iterations

While there exists a free woman who can propose

Let  $w$  be such a woman and  $m$  be the best man she has not proposed to

$w$  proposes to  $m$

If  $m$  is free

$(m,w)$  get engaged

Else  $(m,w')$  are engaged

If  $m$  prefers  $w'$  to  $w$

$w$  remains free

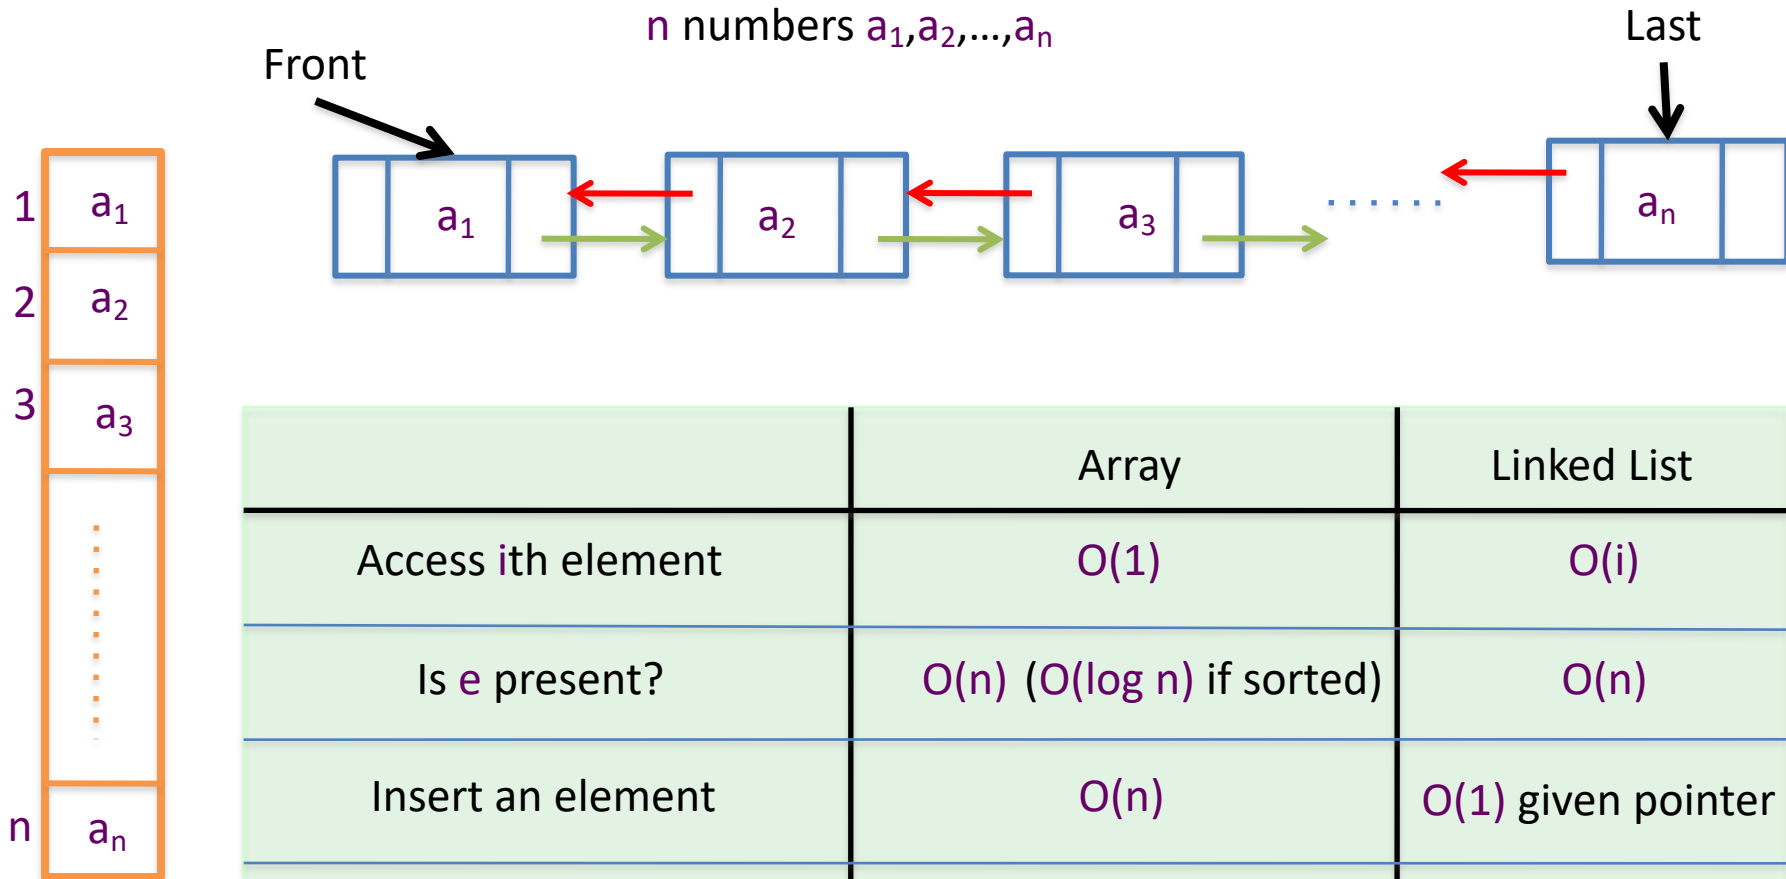

Else

$(m,w)$  get engaged and  $w'$  is free

$O(1)$  time  
implementation

Output the engaged pairs as the final output

# Arrays and Linked Lists

	Array	Linked List
Access $i$ th element	$O(1)$	$O(i)$
Is $e$ present?	$O(n)$ ( $O(\log n)$ if sorted)	$O(n)$
Insert an element	$O(n)$	$O(1)$ given pointer
Delete an element	$O(n)$	$O(1)$ given pointer
Static vs Dynamic	Static	Dynamic

# Implementation Steps

(0) How to represent the input?

(1) How do we find a free woman  $w$ ?

(2) How would  $w$  pick her best unproposed man  $m$ ?

(3) How do we know who  $m$  is engaged to?

(4) How do we decide if  $m$  prefers  $w'$  to  $w$ ?

# Overall running time

Init(1-4)

$n^2$  X ( Query/Update(1-4) )

# Questions?

# Puzzle

Prove that **any** algorithm for the SMP takes  $\Omega(n^2)$  time

# Main Steps in Algorithm Design

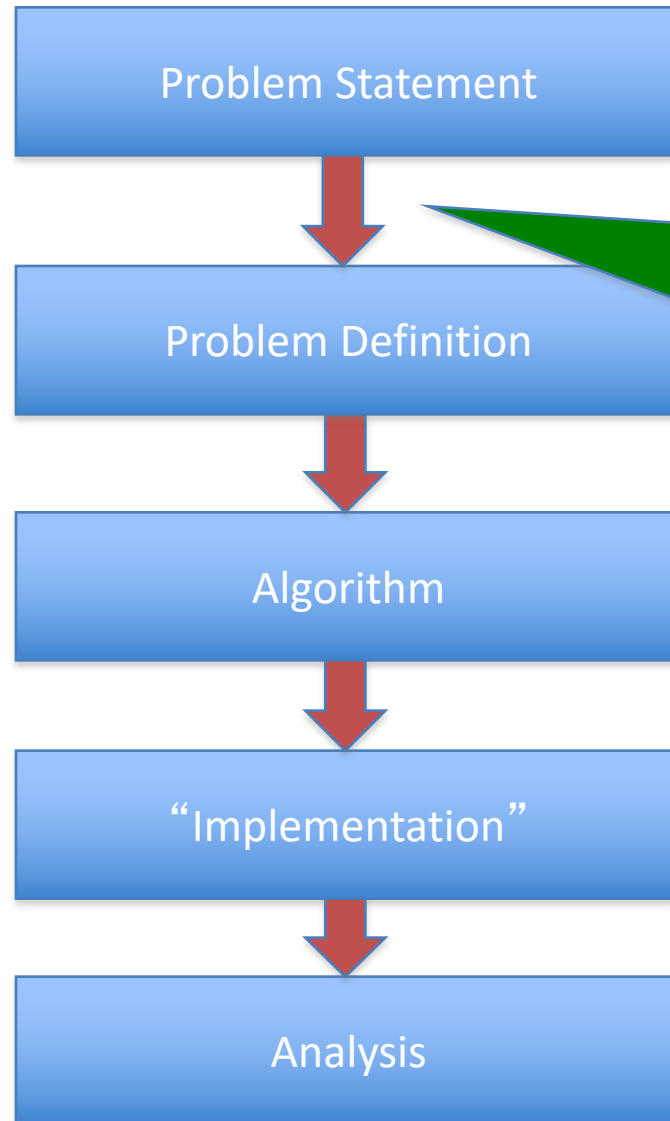

Correctness Analysis

## Airline Route maps

Book travel | Manage your flights | Travel deals | Where we jet | TrueBlue® program

# What does this graph represent?

# And this one?

Math articles on Wikipedia

Visualization based on the Wikipedia graph of 1,000,000 articles, 10,000,000 links, and 10,000,000 words. The graph is a complex network of interconnected nodes and edges, representing the relationships between articles. The nodes are colored based on their degree or other properties, and the edges represent the links between them. The visualization is a circular force-directed graph, where nodes are positioned based on their connections and repulsion forces.
