Quiz starts at 10:20 am and ends at 10:30 am

Lecture starts at 10:35am

Final exam post

stop following

Final exam post

I'll start off with some generic comments:

- The final exam will be based on all the material we will see in class up to NP-completeness of k-colorability (we'll most likely finish that stuff by Wednesday, Dec 4).
 - o In case you want a head-start we will cover Sections 8.1-8.4 and Section 8.7 in the textbook. For the rest the schedule page details what sections of the book we have already covered.
- Exam will be from 8:30am to 11:00am on Friday, Dec 17 in class (Knox 110). Note that the exam will be for 2.5 hours and not 3 hours as it says on HUB.
 - o If you have three of more exams scheduled on Dec 17, please contact me NO later than 5PM on Wednesday, DECEMBER 1. If you contact me after Dec 1, I won't be able to accommodate any re-scheduling request.
- DO NOT FORGET TO BRING YOUR UB CARD TO THE EXAM (@510)

Next are comments related to preparing for the finals:

- 1. Take a look at the sample final (@507) and spend some quality time solving it. Unlike the homeworks, it might be better to try to do this on your own. Unlike the sample mid-term, this one is an actual 331 final exam so in addition to the format, you can also gauge how hard the final exam is going to be (your final exam will be the same ballpark). However as with the sample mid-term, you make deductions about the coverage of topics at your own peril (but see points below). Once you have spent time on it on your own, take a look at the sample final solutions (@507).
- 2. We will have some extra OHs on Mon Dec 15 to Wed Dec 15 (details TBA).
- 3. The actual final will have the same format as the sample final: The first question will be T/F, 2nd will be T/F, and will be the three will be longer questions and will ask you to design algorithms (parts of them might be just analyzing an algorithm.)
- 4. For the T/F questions (i.e. the first two questions), anything that was covered in class or recitations or piazza is fair game. If you want to refresh your memory on what was covered, take a look at the schedule page. If you want quick summaries of (almost all) the lectures, review the lecture notes or slides or videos.
- 5. To get more practice for the T/F questions, review all the T/F polls on piazza (@235)
- 6. For the remaining 3 questions, one will be on greedy algorithms, one will be on divide and conquer algorithms and one will be on dynamic programming. However, note that Chapter 2 and 3 in the book are basic stuff and almost any question in the final could fall under the purview of those two chapters. There will be at least one T/F and one T/F with justification Q for the NP-complete material so y'all should definitely focus on those as well but I will not ask any "proof based" Qs on that material.
- 7. In previous finals, like your mid-terms, there have been questions that are either straight lifts from homeworks or are closely related and this trend will continue in the actual exam (not for all questions though). This means that you should review your homeworks (all of them) before the exam. Also make sure to review the support pages and recitation notes.
- 8. If you are short on time and you are prioritizing the topics to study, keep points 6 and 7 above in mind.
- 9. Sections in the book that were not covered at all in the class but were handed out as reading assignments or recitation notes: I can also ask any direct questions from them. In addition, it might be useful to read them to get a better feel for the material. In any case once you have read the material covered in class a couple of times, it might do your brain some good to read some different material.
- 10. You can bring in **two** 8.5"X11" review sheets (you can use both sides on both). Use this judiciously: they can be a very useful tool to note down some weird things you have a hard time remembering and/or noting down specific references. However, do **not** spend a lot of time preparing these sheets: they can be huge time sinks without much payoff.

Next are some suggestions for when you are in the exam:

- 1. Spend 5-10 minutes reading all of the questions in one pass: this'll let the problems germinate in your subconscious until you actually get to solving them.
- 2. You should have plenty of time for the exam: by my count a well prepared student should be done by spending at most one minute per point, i.e. 100 minutes. The exam will be for 150 minutes, so you will have 50 extra minutes.
- 3. If you are not sure how to design an algorithm for a problem in the exam I generally recommend the following sequence:
 - . Try and see if you can reduce the problem to something you have already seen in class;
 - . If not, then try and slightly modify an existing algorithm we have not see;
 - . If not, only then try and build an algorithm from scratch.
- 4. Just to be sure the point above is just a recommendation-- your mileage may vary.
- 5. Once you reach the exam room, try to relax. Once you are there, you have done all the hard work, stressing out about the exam is not going to make the exam any easier for you. Relax, it's just an exam! The worst thing that can happen is you will do a bit

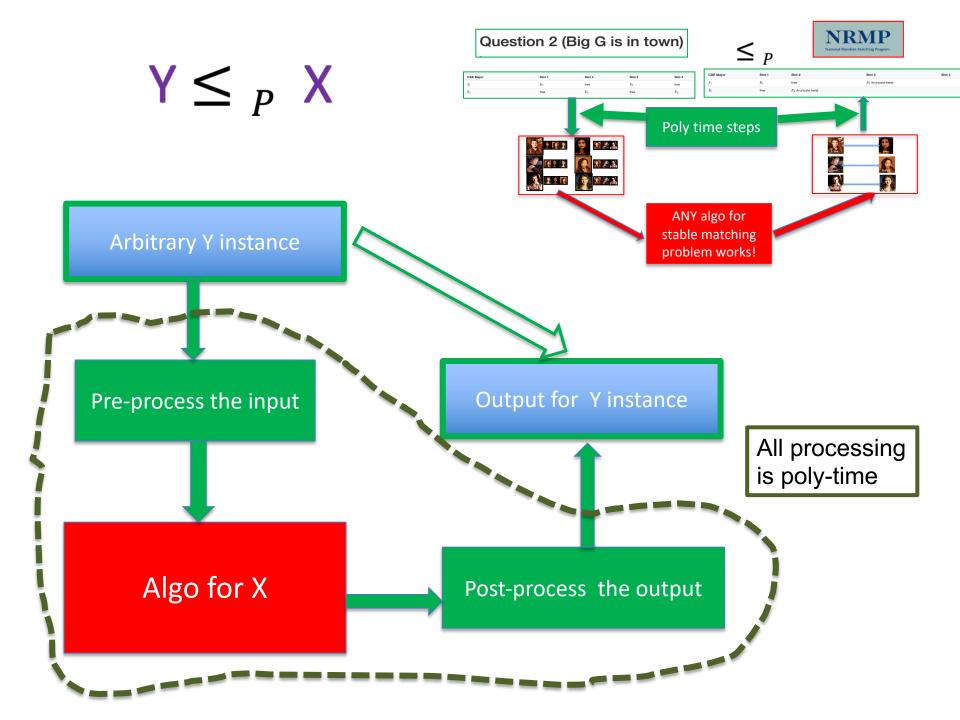

Bring your UB card to final
